

Documentation for OldPhonePadDecoder

Overview

The OldPhonePadDecoder convert text input using an old mobile phone keypad. Users input a sequence of numeric key presses and the program decodes the input to corresponding text.

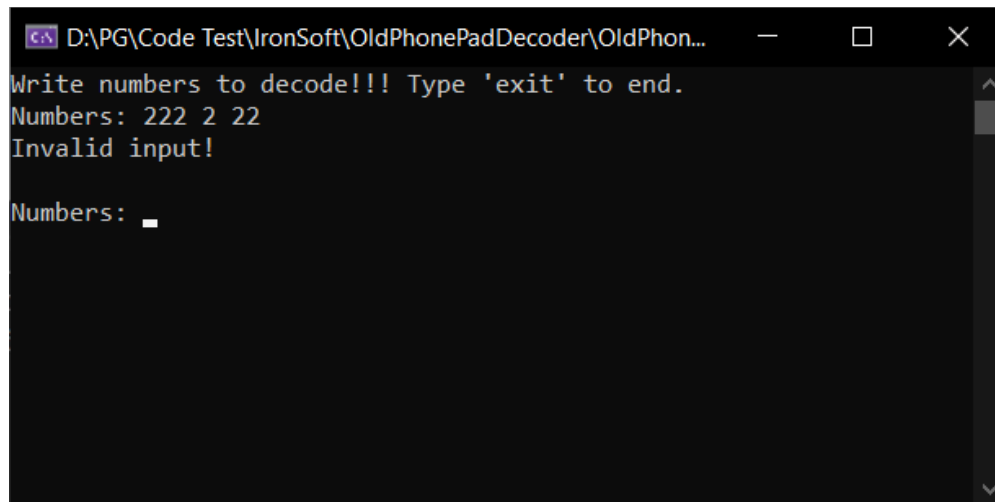

Example Usage

Enter a sequence of keypresses followed by the # key to initiate decoding. The program displays the decoded text.

```
Write numbers to decode!!! Type 'exit' to end.  
Numbers: 4433555 555666#  
HELLO  
  
Numbers: _
```

If the input is invalid, an error message will be shown.

```
D:\PG\Code Test\IronSoft\OldPhonePadDecoder\OldPhon...  
Write numbers to decode!!! Type 'exit' to end.  
Numbers: 222 2 22  
Invalid input!  
  
Numbers: _
```

Enter new input sequences to decode or type exit to close the program.
